

How to use Update Flash Utility

The software support Windows XP

Step1: Please choose “update-flash-utility” folder.

Step2: Prepare CameraDB.sr file in “update-flash-utility” folder.

Step3: Prepare all voice files in “update-flash-utility” folder.

Step4: Connect device by USB cable

Step5: Execute “update.exe”.

Step6: Choose com port and choose “Open COM Port” button to open com port. If com port opened, diagram will show device “Serial number” ”Database version” “firmware version” “Hardware version” .

Step7: if you want to update speed camera database ,please choose “Update Camera Database” button. When update finished, you can choose “Dump Camera Database For Compare ” and it will build a dump.txt file.
You can compare dump.txt with CameraDB.sr file to mark sure update succeed.
(dump.txt file had some string show 0x000,just for database security)

Step8: if you want to update voice ,please choose “Update wave file” button. When update finished, you can choose “Test wave” button to test all voice.

Step9: Choose “EXIT” button to exit application software.

Step10: Disconnect device.

Note : 1. If agent provide database encode by device serial number, user must provide device serial number to agent for database encode
