

AVIC-N1 technical menu

To access technical menu in Pioneer navigation AVIC-N1
you have to follow these instructions:

To access it you have to hold RESET and EJECT...release RESET but hold EJECT
You will see following screen:

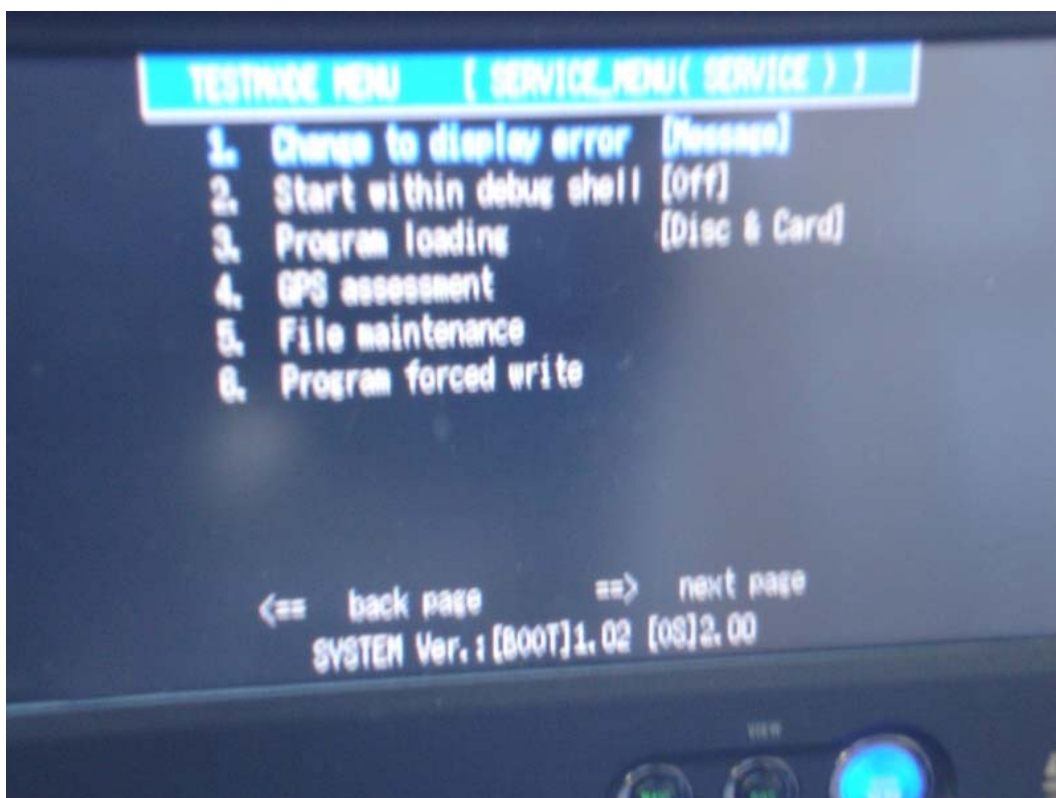

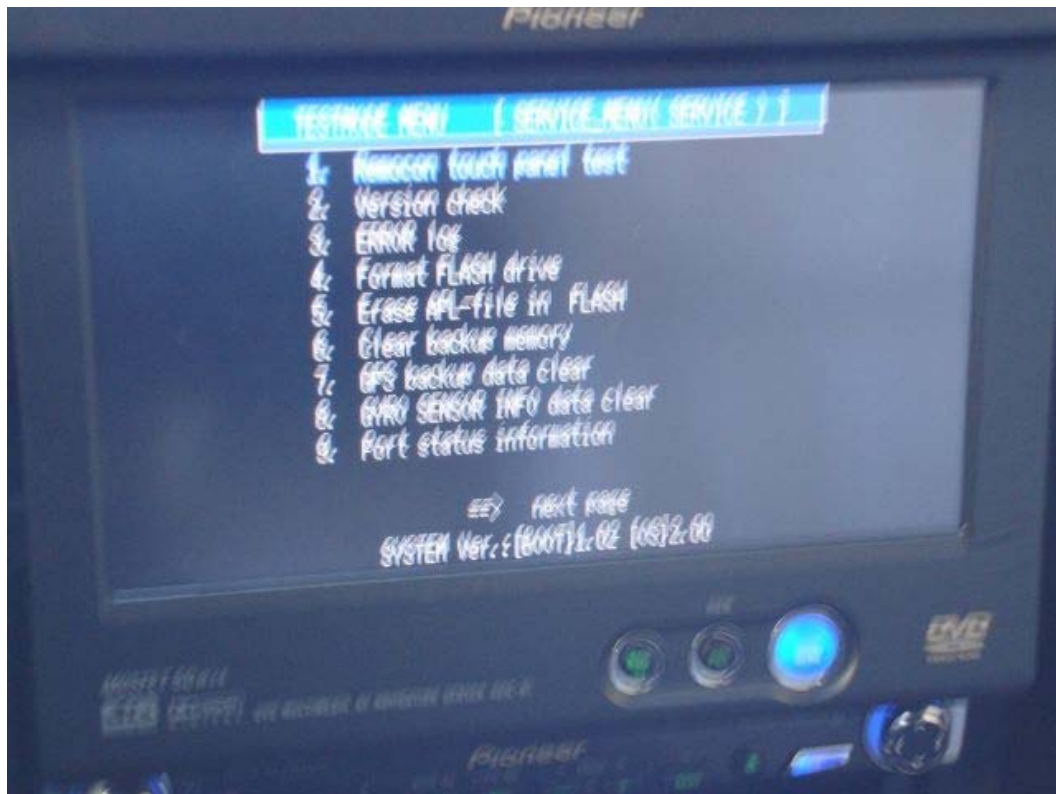

You have to enter the code with the joystick button:

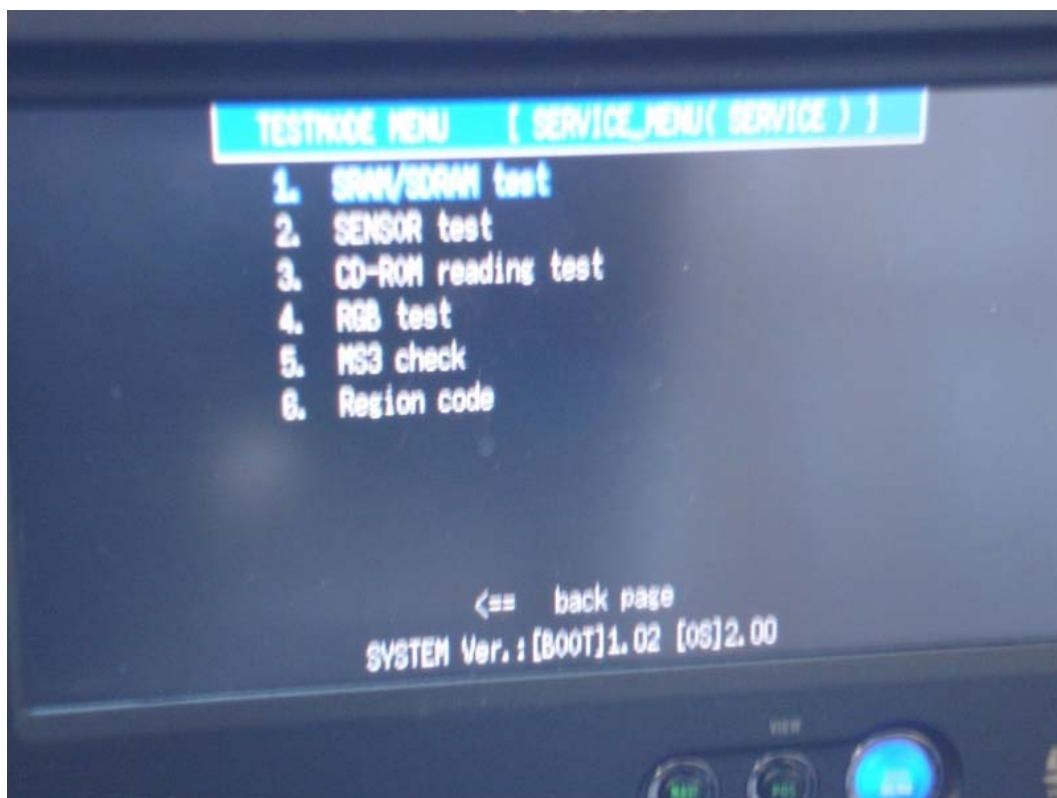

**up, right, up, right, down, right, down, right,
OK (press joystick button).**

....a password screen then appears (but you don't have to input any password)!!

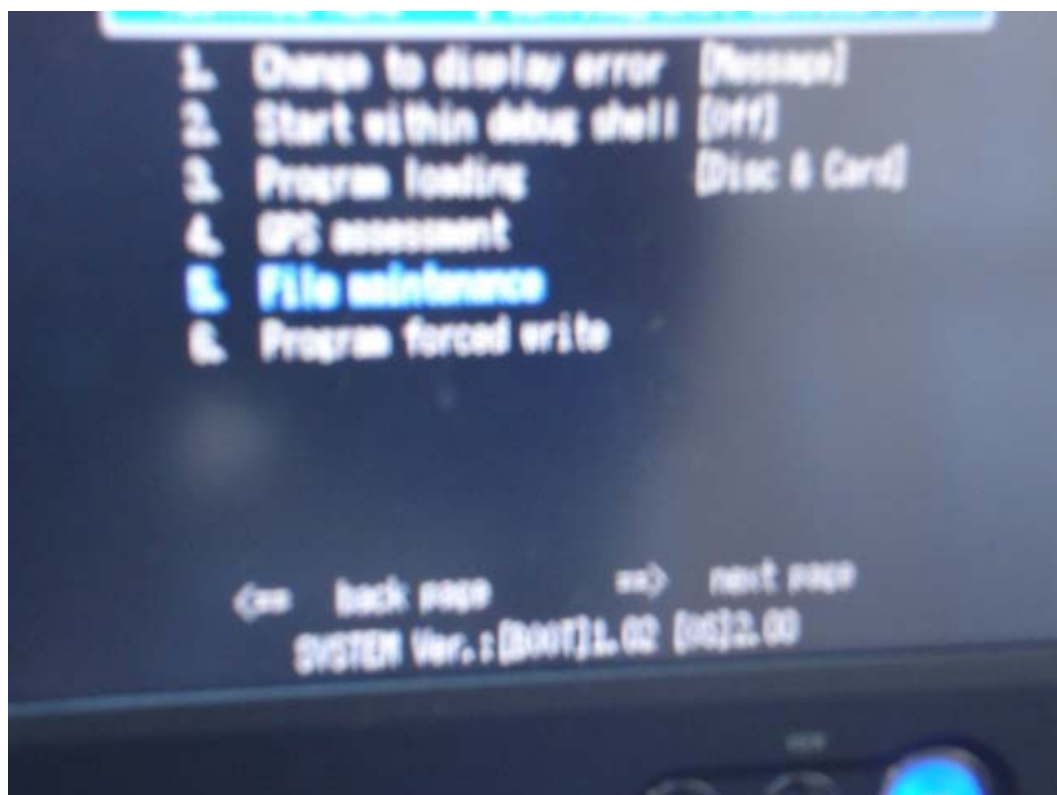

And after several seconds this main technical menu appears.

(use joystick to navigate between screens):

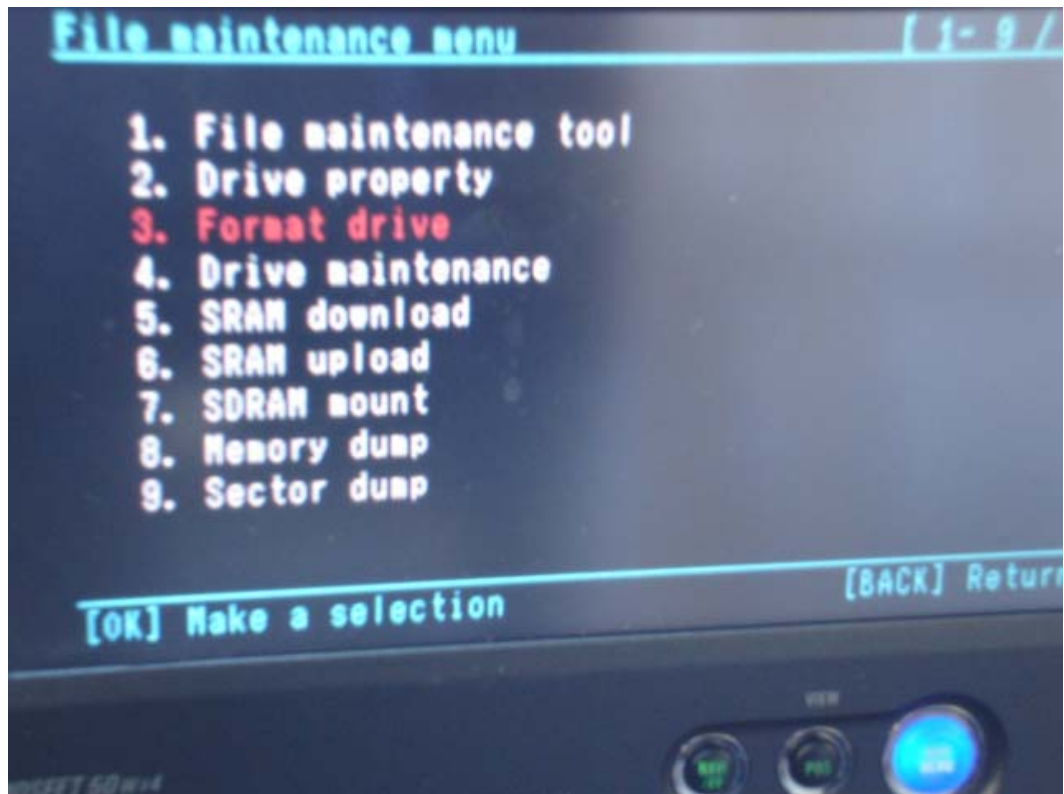

Go into those submenus and first clear out the memory.
Go to file maintenance menu:

Format all the areas and clear all memory.
You'll find options for this under those submenus.

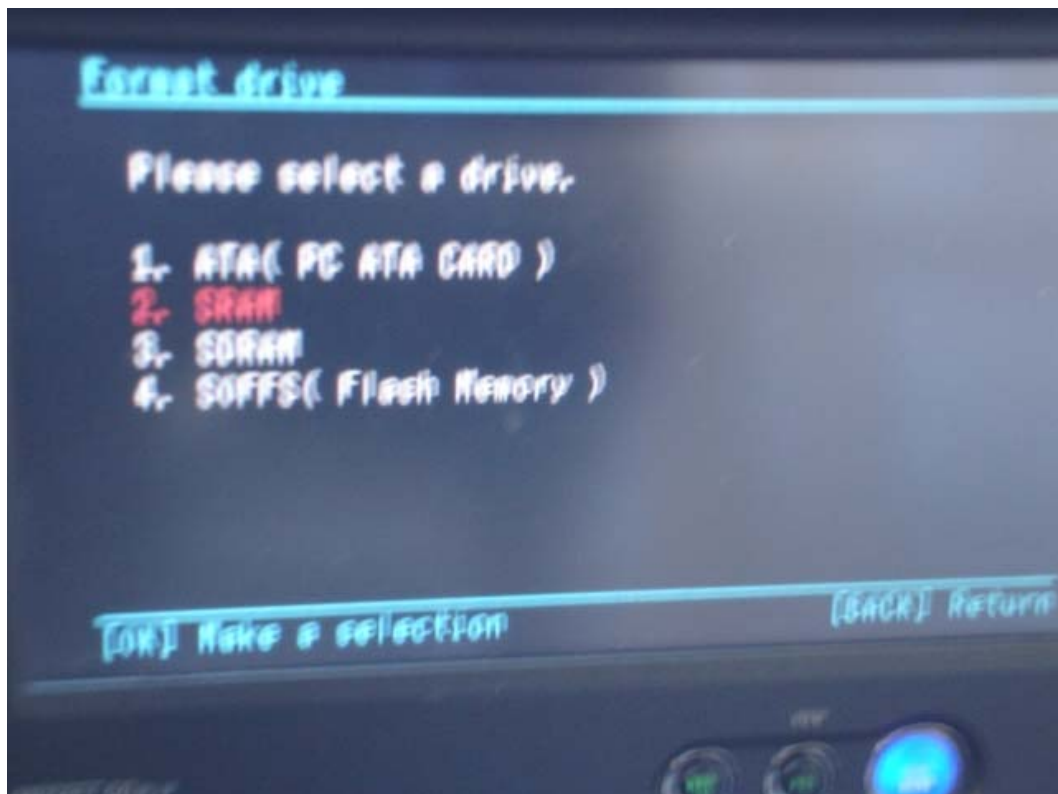

Choose format drive sub-menu:

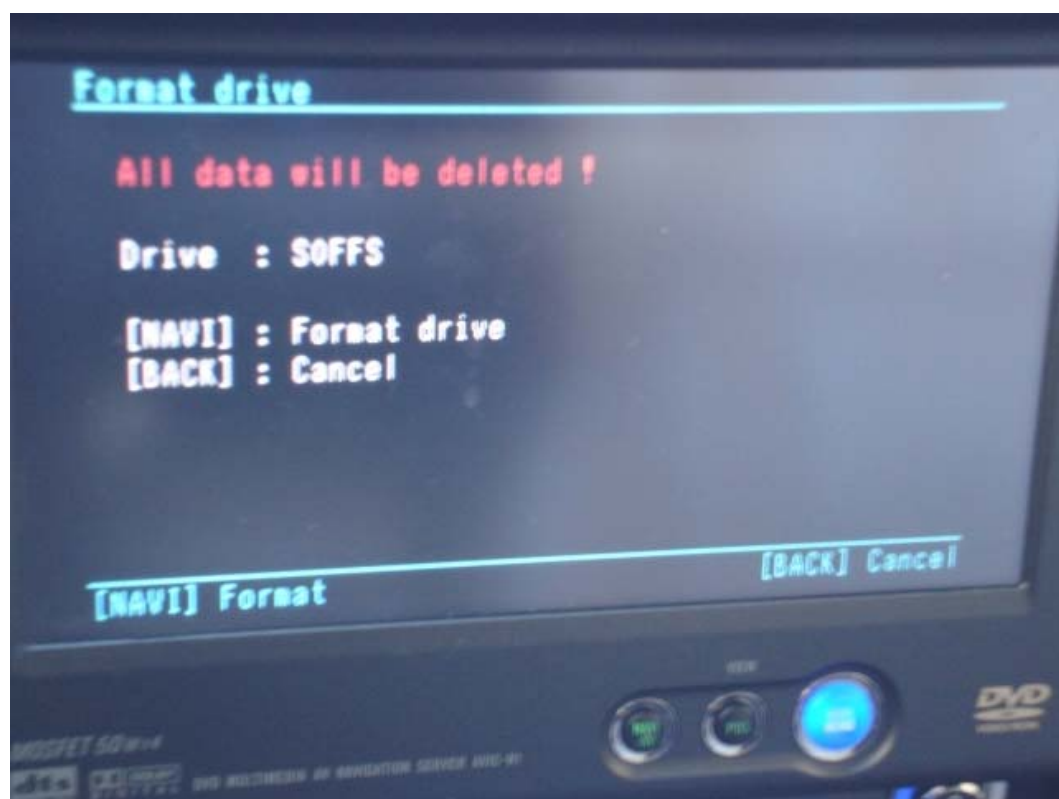

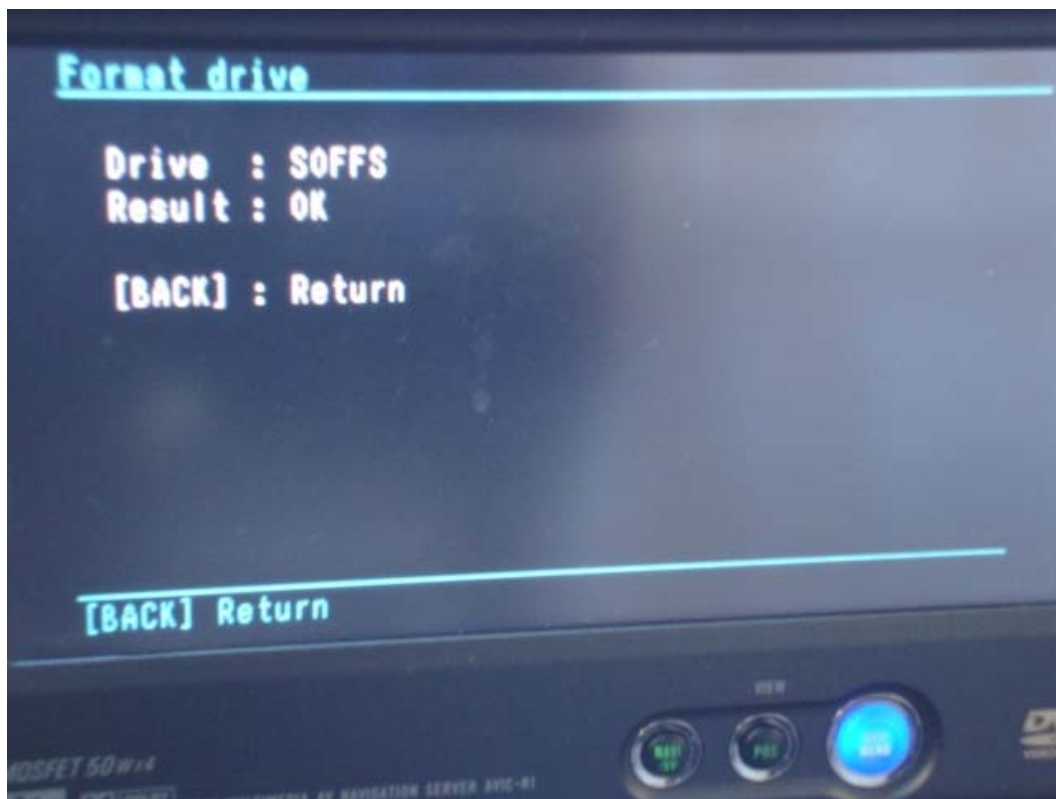

I.E....clear backup menu, format SRAM.....etc.

Go ahead and clear all memory areas you turn up.

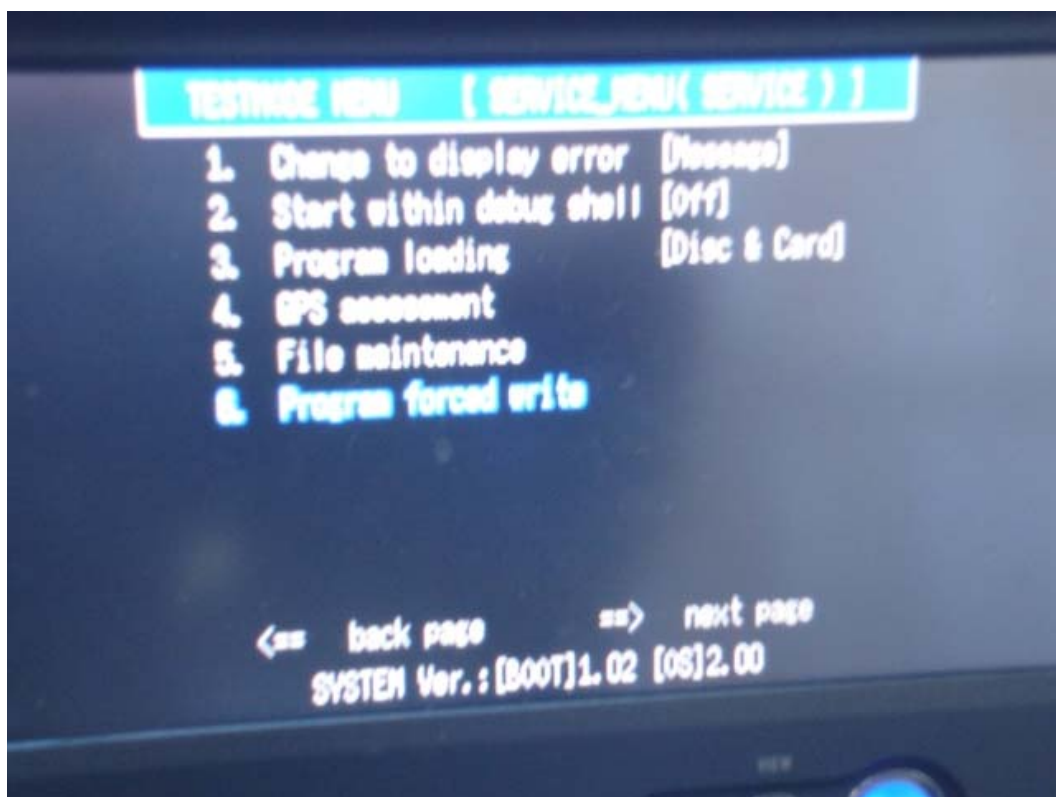

I did with no ill effects other than starting my unit off completely fresh.

Then you will need to go into the Program Force Write menu (from main 3 menus):

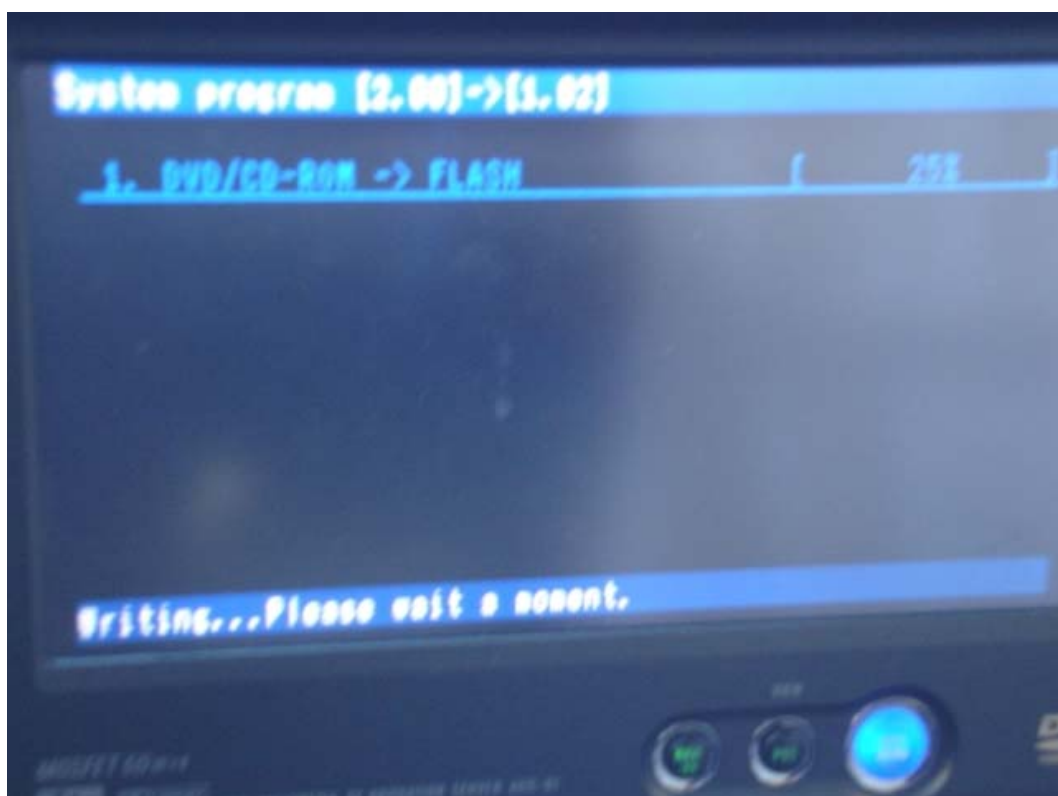

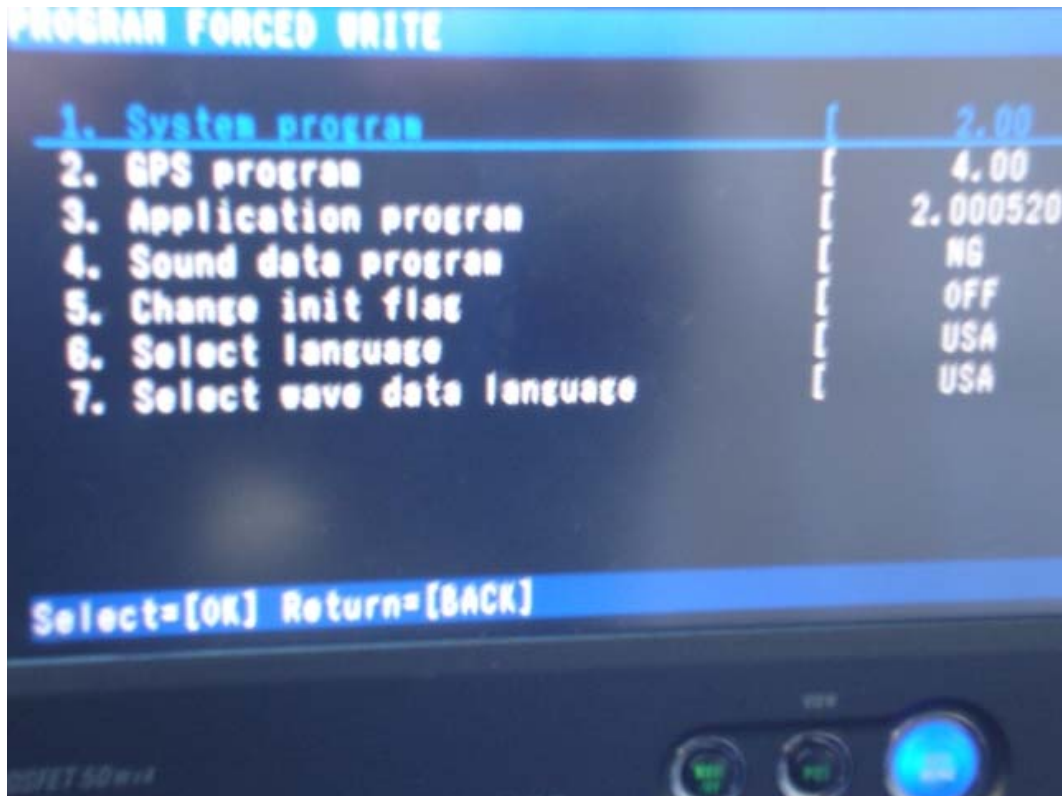

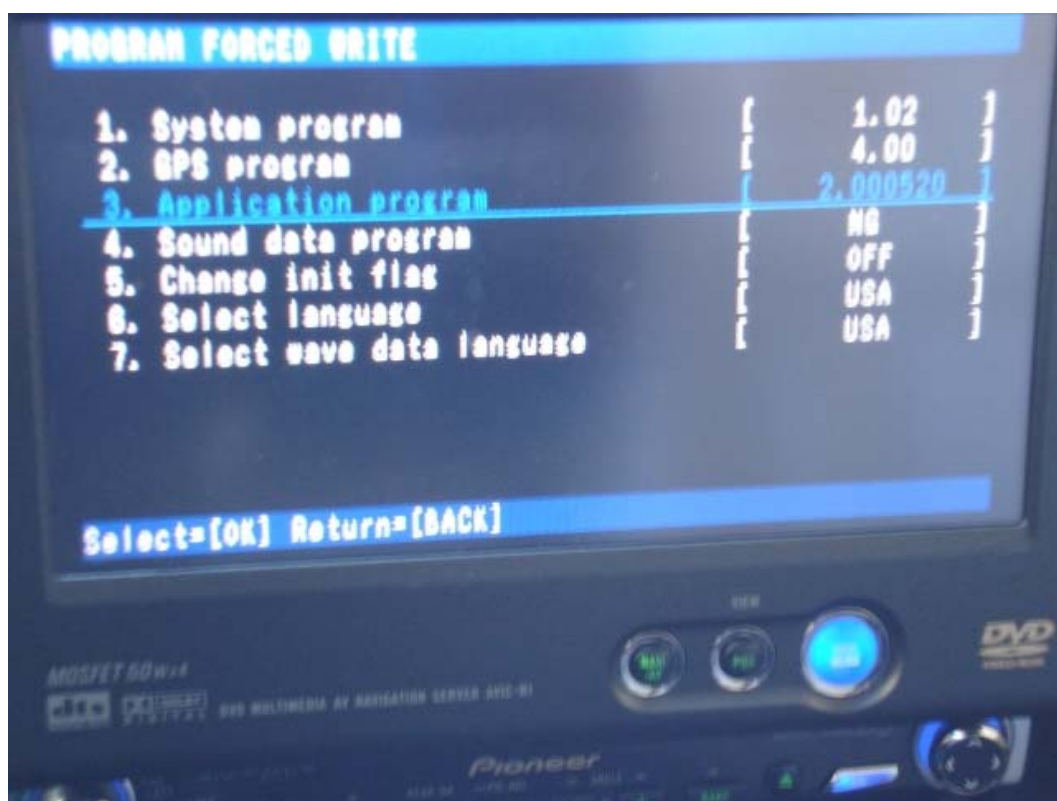

At this step you have to insert your original CNDV-40MT disk. Choose “force write” for:

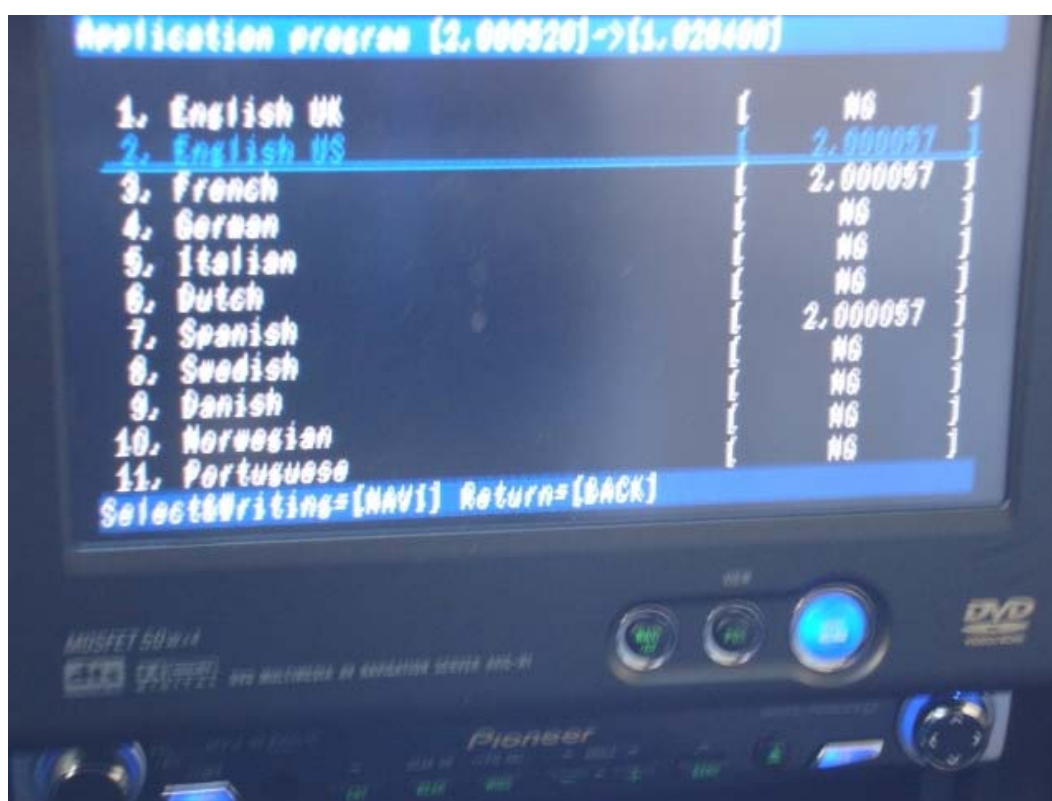

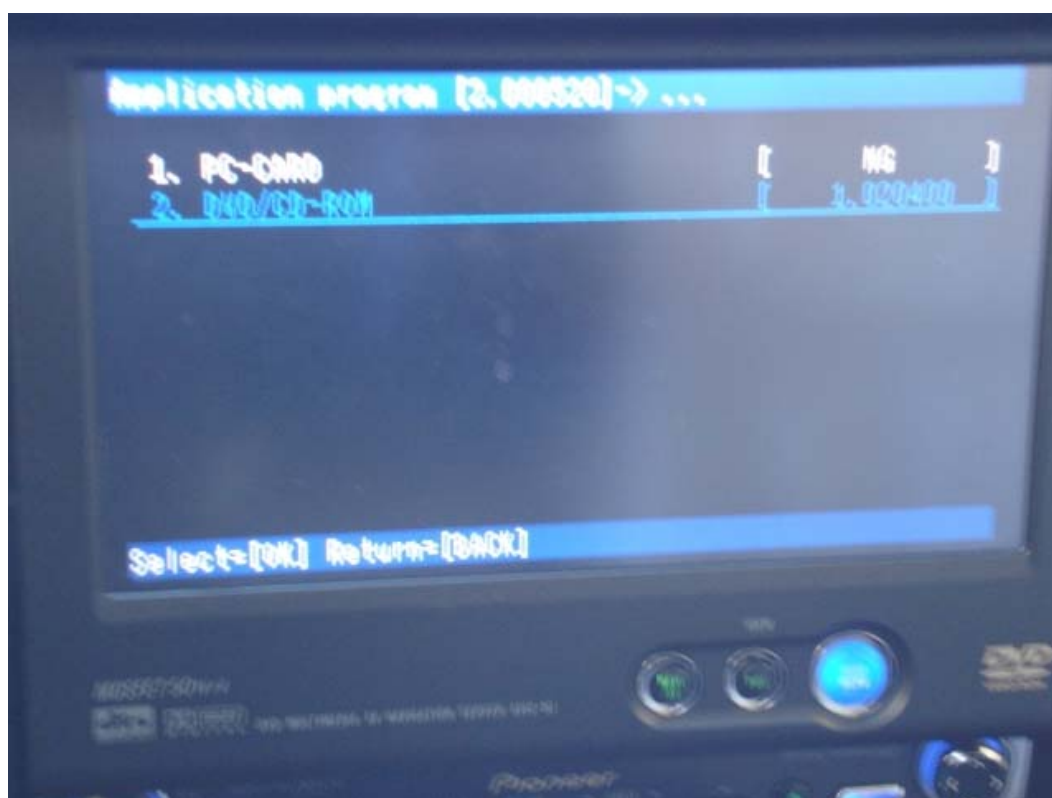

1. System program
2. GPS program
3. Application program

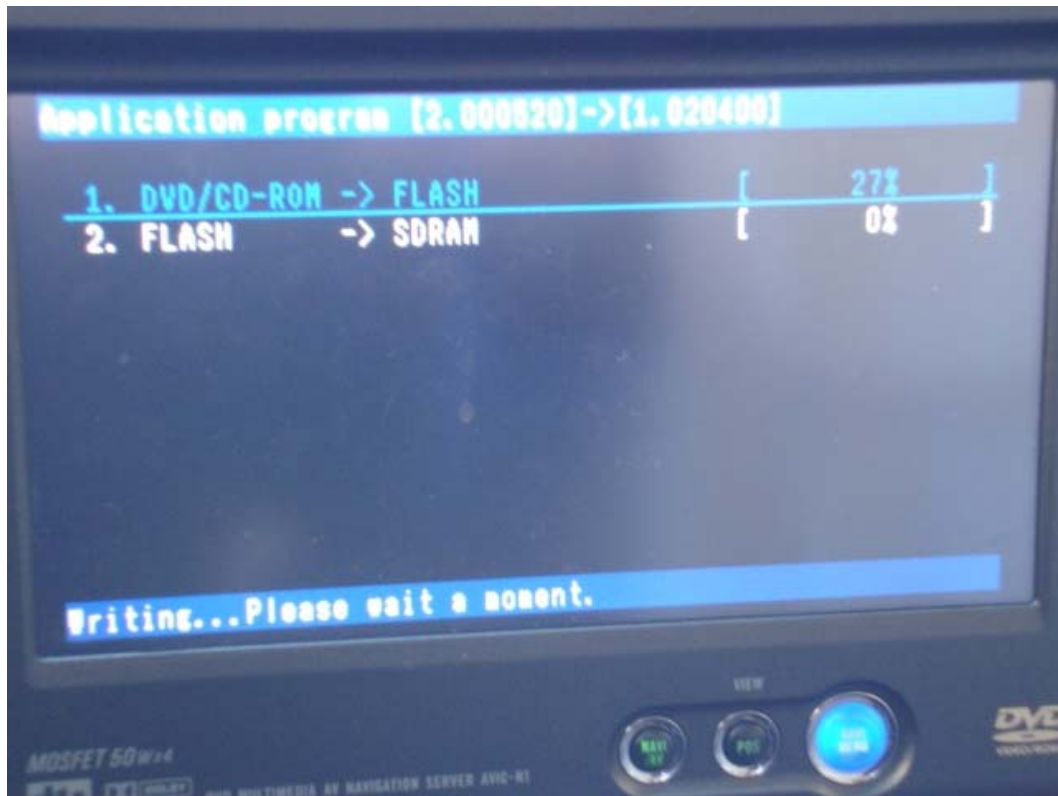

With your 40 version disc inserted into the drive....
forces write all the old software versions.

Depending on your current CNDV-50MT version of software on your navigation system,
you may see a different picture than you see below:

Congratulation! Your system now back to original **CNDV-40MT** software.
Press “reset” button on you navigation and you are done.
