

Thanks to Navigator Free, I was able to give a second life to my old Viamichelin X-970T GPS! Viamichelin stopped manufacturing GPS some years ago, and you cannot update the maps anymore. Hopefully I was able to install Navigator Free on it, and I now have a brand new GPS with maps from all over the world for free!

To install Navigator Free on the VM X-970T:

- On an empty SD card - this way you keep the original card just in case... - (I recommend a 2 Go card), create a "InstallSD" folder
 - Download Navigator Free set-up utility
- With the set-up utility, install Navigator Free on the SD card in the InstallSD folder: choose "Install the software"
 - / "Install Pocket Navigator" / "Windows CE device" (the VM 970 runs on Windows CE 5)
- Still with the set-up utility, install the maps you wish in the same folder: choose "Install Data", and install the language too.
 - In the InstallSD folder, rename "Navigator.exe" to "InstallSD.exe"

There are some missing Dlls on the Viamichelin that you need to install too. Here is the list:

coredll.dll, ole32.dll, oleaut32.dll, shlwapi.dll, wininet.dll, ws2.dll, zlib.dll

Type "download coredll.dll, ole32.dll, oleaut32.dll, shlwapi.dll, wininet.dll, ws2.dll, zlib.dll" on google

Copy the Dlls on the SD card, still in the same folder.

Insert the SD card in the GPS and perform a soft reset (insert a paperclip in the back).

- so erlaubt <limit_expansion> die Anzahl der Rechenschritte zu erhöhen was auf mobilen Navis zu besserem Routing führt
- am PC geplante Routen werden in einer Datei routing_points.xml im Profilverzeichnis des Benutzers abgelegt
- aus der xml Datei können einzelne Routen auf das Navi kopiert werden in der xml Datei werden diese durch <set> </set> eingeschlossen
